## My first *wise* sayings

1. We are more than 7 billion people on Earth, but I doubt someone knows exactly who we are...
2. I think we should never come to know that we know everything...
3. If a million-dollar idea crossed your mind one day, please be aware of this: there are night dreams and there are day dreams as well, you have nothing to worry about.

4. The Einstein's light still has the greatest speed of all.

5. Darwin told us about the human evolution two centuries ago, but many people are still waiting for directions...

6. The truth is definitely out there, but much farther away.

DARWIN

7. The number of problems gets bigger and bigger all day long, but the number of solutions seems to increase during the short nights...

8. You still cannot distinguish between Natural and Artificial Intelligence? Don't worry, you may always ask for the first million decimals of Pi!

9. Unfortunately, intelligence is something we can measure with great accuracy.

MC<sup>2</sup>INSTEIN

10. Particles, atoms, specks of dust, planets, stars, galaxies, universes, particles, atoms...

11. Difficult choice: to prove my new theory or to demonstrate it cannot be proven?

12. Do you want billions of *small* beings to worship you? All you have to do is to create a *Big Bang* and then wait about 14 billion years!

## NEWTON

13. Everything is *relative*, but the *absolute* is really something.

14. The light does truly exist; we only have to see it.

15. When it comes of flying, my thoughts seem to have some expertise...

16. How can you tell if a green alien gets upset?

## TESLA

17. Do you think Mars is a far-away planet? Think again! Proxima Centauri b, the closest exoplanet to Earth, is *only* 200,000 times farther away from us...

18. When a new born baby cries on Earth, the universe hears and lights up one thousand new stars.

19. In the repulsive darkness of the cosmic space, black holes are definitely the most attractive stars.

20. *Artificial Intelligence* became smarter than us, we hate it. But *Artificial Intelligence* is working for us, we also love it.

### **A few more sayings**

21. Once the weakest link is removed, all the other links in the chain will seem stronger.

22. Things are relatively clear in my absolutely perfect vision.

23. You have to turn on the light in order to see those dark shadows...

24. If a theory of *everything* would exist, it should explain any possible *thing*, including *something* and *nothing*.

25. Neurons - small human cells specialized in hiding big secrets.

26. We are all made of stardust, for sure, but the exact recipe is still unknown.

27. Certainly, physicists have spent a lot of energy trying to shed light on the dark energy mystery.

28. Science, in general, is gaining some extra momentum at this particular moment.
